

Assignment -2 Python
Programming

Team ID:PNT2022TMID53952

Assignment Date	24 September 2022
Student Name	Aruna A
Student Roll Number	95071914012
Maximum Marks	2 Marks

Question-1:

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution:

```
import random
import time while(1):
    temp=random.randint(0,80) hum=random.randint(0,80) if(15<=temp<=30):
        #room temperature in degrees Celsius between
        15C - 30C print("Temperature is normal. Temperature =
        ",temp) elif(temp<15): print("Temperature
        is too low.
        Temperature = ",temp) elif(temp>30):
        print("Temperature is too high. Temperature = ",temp)
        if(30<=hum<=50): #humidity may percentage between 30% - 50%
            print("Humidity is normal. Humidity = ",hum)
        elif(hum<30): print("Very less humidity.
        Humidity = ",hum) elif(hum>50):
```

```
print("Very high humidity. Humidity = ",hum)
print() time.sleep(2) #It observe temperature every 2 seconds
```

SAMPLE INPUT AND OUTPUT :

The screenshot shows a Python IDE with a file named `Assignment_2.py`. The code implements a loop that generates random temperature and humidity values and prints status messages based on these values. The code is as follows:

```
1 import random
2 import time
3 while(1):
4     temp=random.randint(0,80)
5     hum=random.randint(0,90)
6     #room temperature in degrees Celsius between 15C - 30C
7     if(15<=temp<=30):
8         print("Temperature is normal. Temperature = ",temp)
9     elif(temp<15):
10        print("Temperature is too low. Temperature = ",temp)
11    elif(temp>30):
12        print("Temperature is too high. Temperature = ",temp)
13    #humidity max percentage between 30% - 50%
14    if(30<=hum<=50):
15        print("Humidity is normal. Humidity = ",hum)
16    elif(hum<30):
17        print("Very less humidity. Humidity = ",hum)
18    elif(hum>50):
19        print("Very high humidity. Humidity = ",hum)
20    print()
21    time.sleep(2) #It observe temperature every 2 seconds
```

The Run console shows the following output:

```
"D:\coding in (c,java,python)\projects in python\2python\venv\Scripts\python.exe" "D:/coding in (c,java,python)/projects in python/2python/Assignment_2.py"
Temperature is normal. Temperature = 21
Humidity is normal. Humidity = 37

Temperature is too high. Temperature = 60
Very less humidity. Humidity = 20

Temperature is too low. Temperature = 6
Very less humidity. Humidity = 21

Temperature is too high. Temperature = 53
Very high humidity. Humidity = 62

Temperature is too low. Temperature = 12
Humidity is normal. Humidity = 50

Temperature is too high. Temperature = 60
Very high humidity. Humidity = 78
```
